# Components breakdown

1. The object: A Blender

Main function: Blend stuff.

3. Materials

Main material: Plastic
How many different material: ~5.
The parts can be easily separated.

5. End Of Life

It could be partially recycled.
There are many different materials and eletronic parts.

2. COMPONENTS

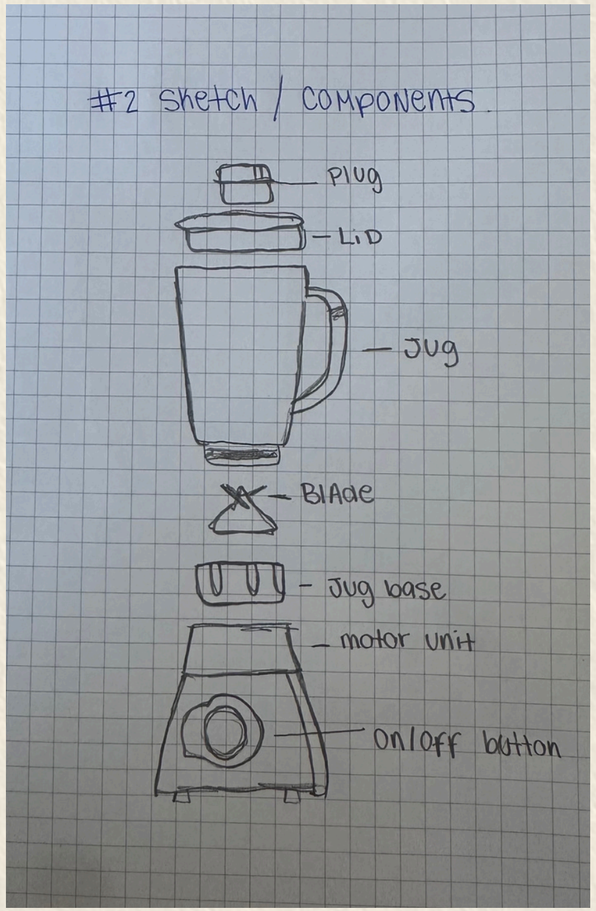

1. Jug, Made of clear plastic.
2. Lid, plastic
3. Blades, steel
4. Sealing ring, rubber.
5. Base casing, plastic
6. Power card, copper

4. MANUFACTURING: injection Molding.

6. Rethink it

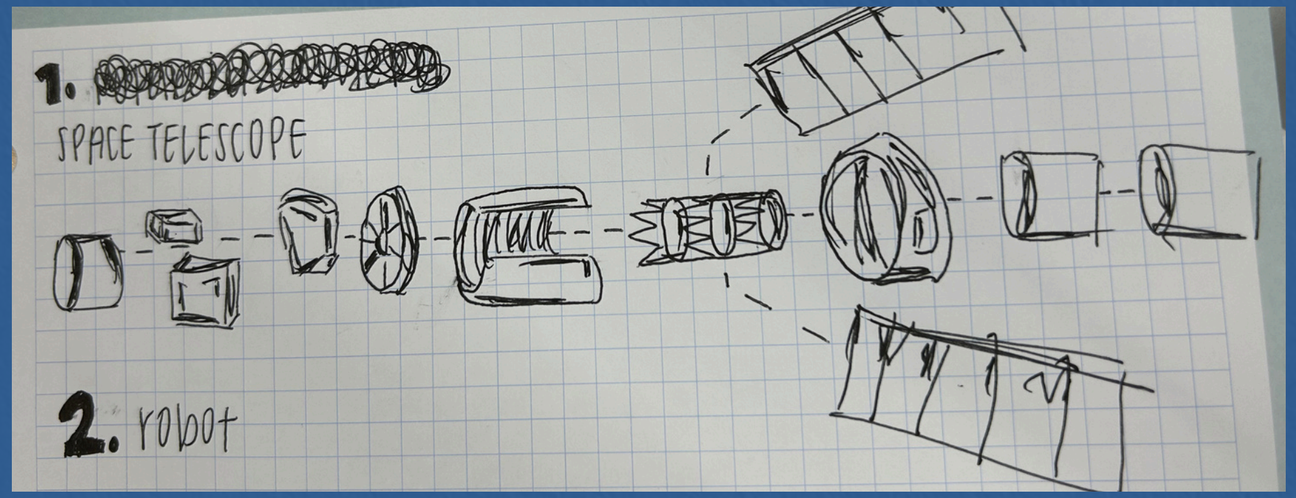

What would you change? use recycled plastic, make parts easier to separate.

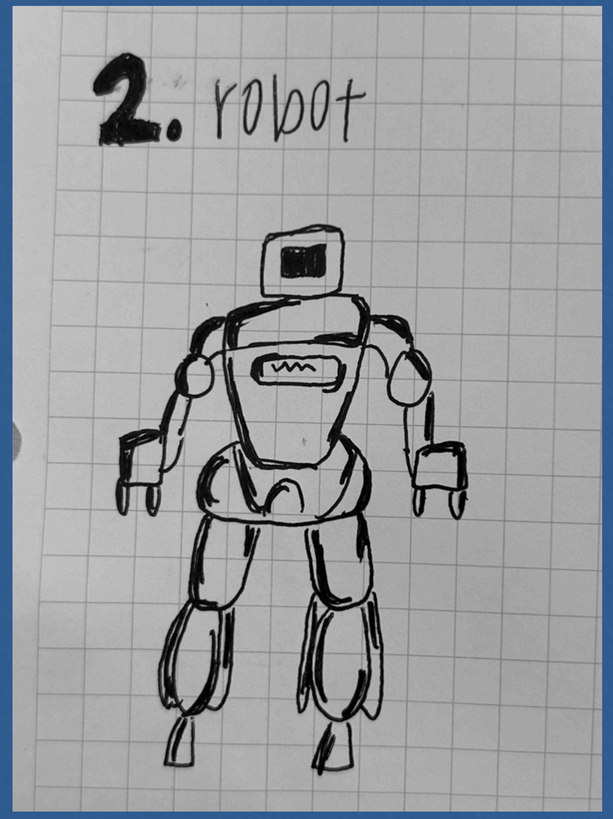

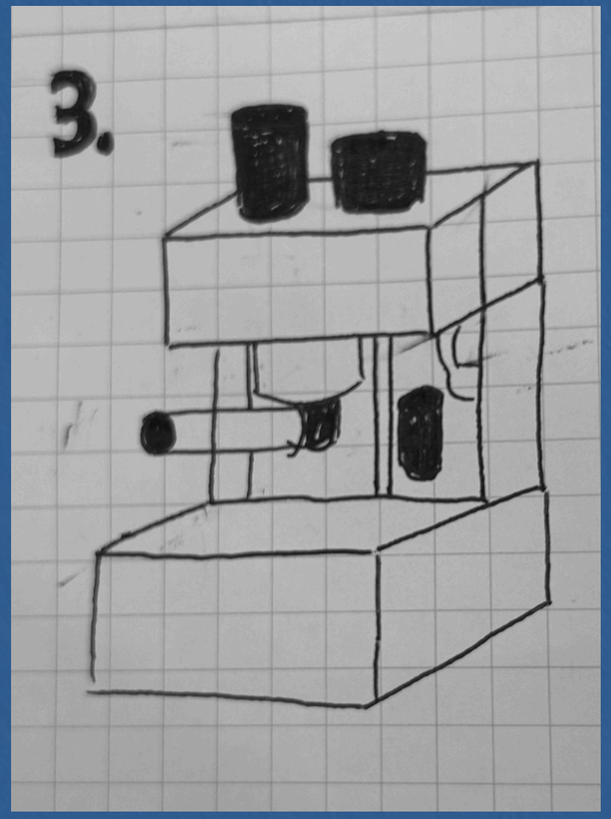

# Our Sketches

- **Telescope:** Made from cylinders, rings, and rectangular parts.
- **Robot:** Has a box-shaped body, round joints, and curved limbs.
- **Machine:** Uses rectangular blocks, cylinders, and a front lever.
- **All three:** Use simple geometric shapes to create functional designs.

# Designing with basic shapes:

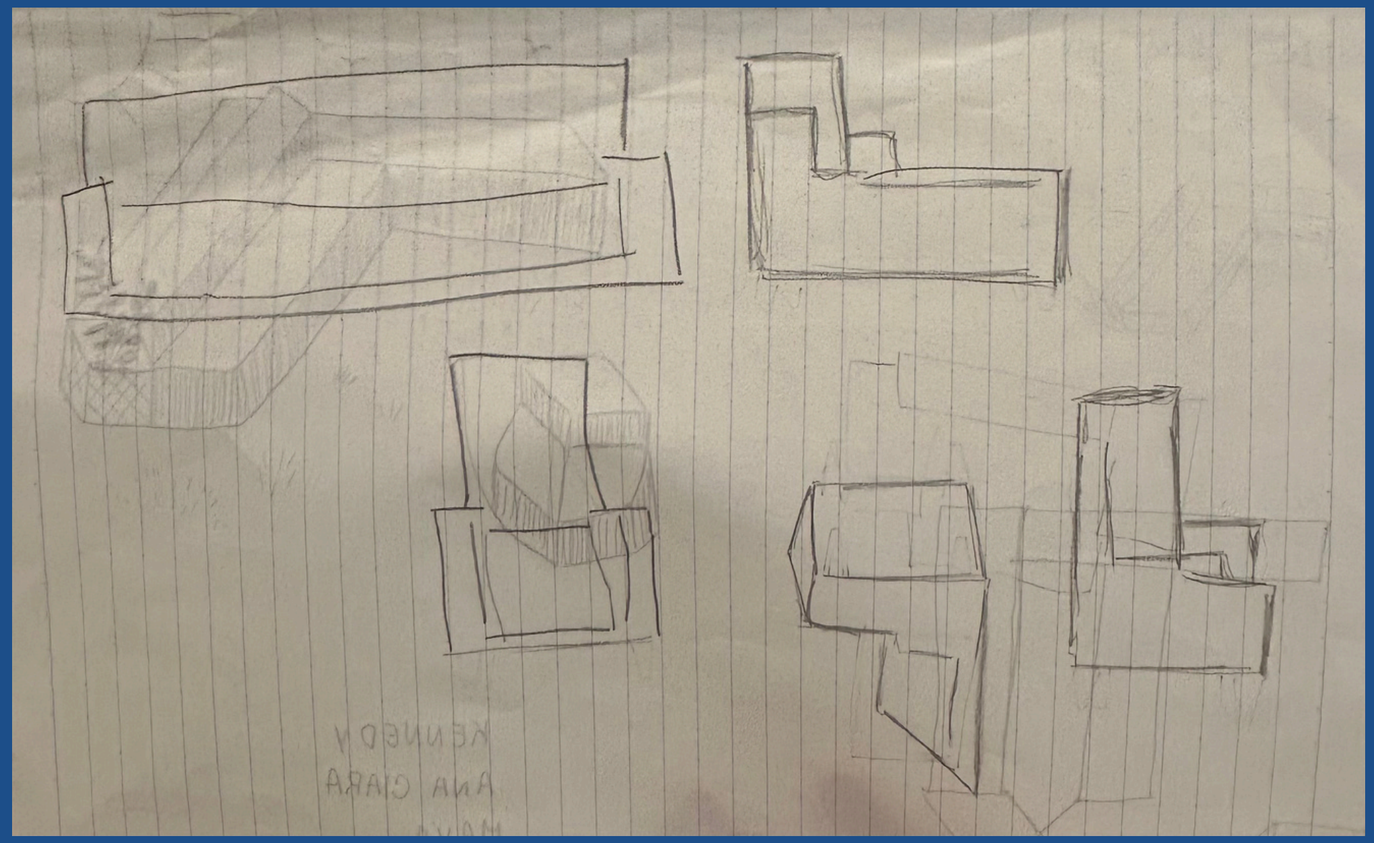

# outdoor workspace :

This sketch shows an outdoor shared work area with long, modular seating and separate movable furniture pieces. The pieces can be rearranged to suit different needs, making the space flexible and efficient.

Some can be used as chairs or tables, allowing people to work alone or gather together. The simple, streamlined design creates a comfortable, modern space, with greenery adding a natural touch.

# bench/ chair initial sketch

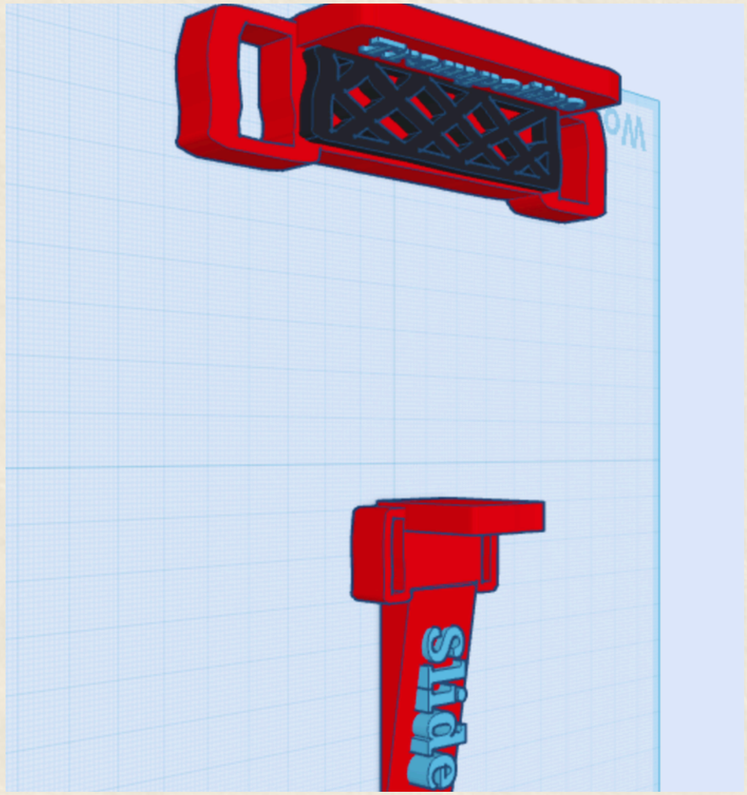

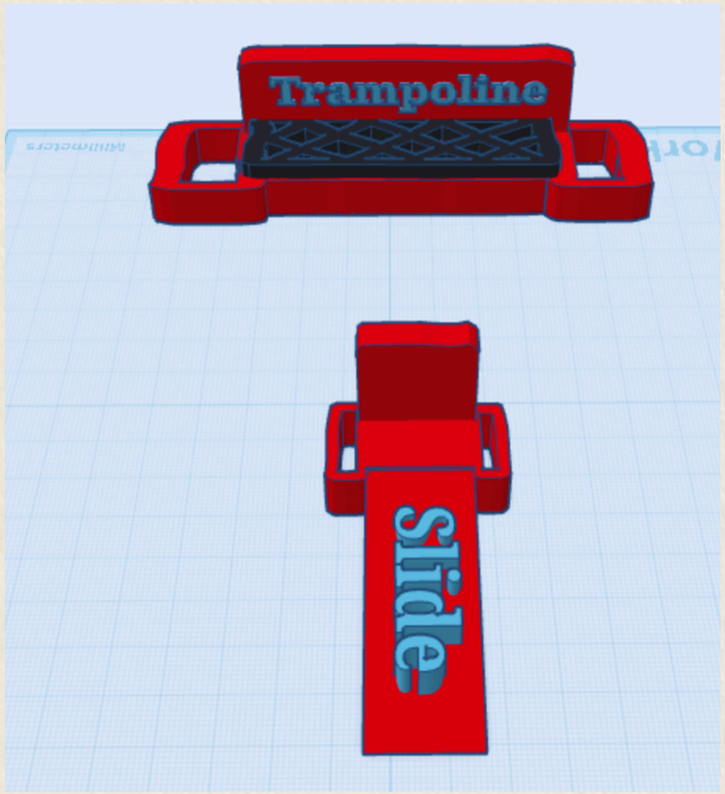

**CREATIVE STRATEGY**

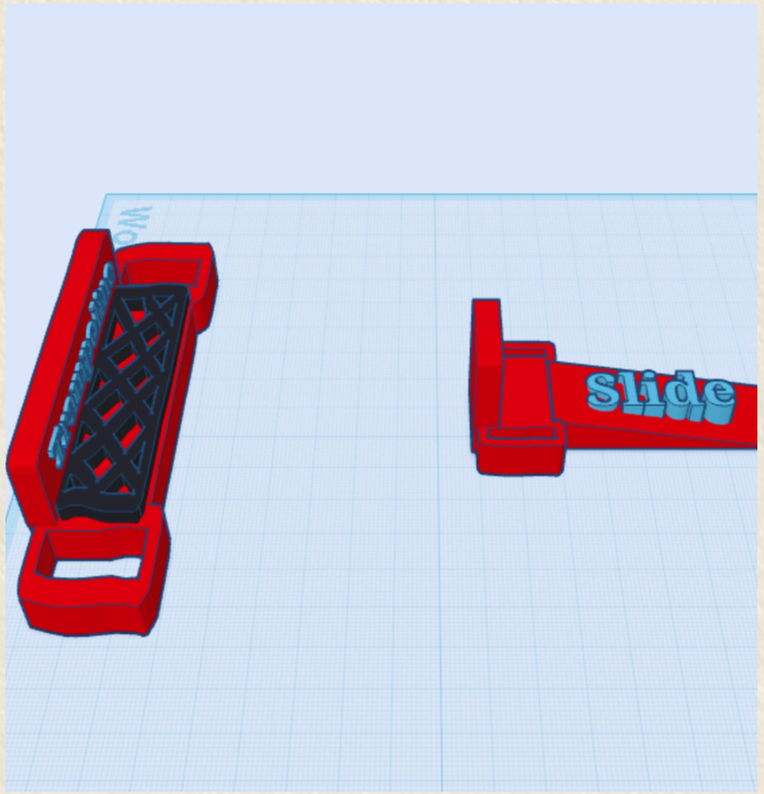

- These sketches show different views of our outdoor seating design.
- The design uses simple, geometric shapes.
- The seats can be arranged in different ways.
- The tall sections provide back support.
- The simple design is meant to feel comfortable and practical.

# our final bench

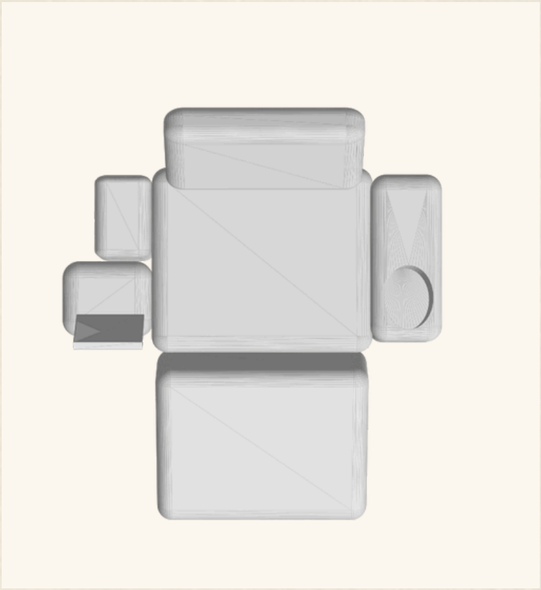

*Curated with purpose, crafted with creativity.*
